

Redefine Agility with Smarter Operations

The only constant in the new normal is change. Because information varies from day-to-day, it's hard to predict what the future will hold. Adding automation into your real estate strategy can help your organization get critical proof points you need to adapt in real time.

IoT by Sodexo uses sensors to measure, mechanize or monitor functions in a building, such as checking temperatures or space utilization. This modular solution lowers costs and increases the breadth of your data collection efforts by connecting multiple sensors into one gateway. Our horizontal platform enables you to mix and match without changing infrastructure or providers. And because data is pushed into one centralized dashboard with real time analytics, you can take immediate action to manage your real estate—whether your site is fully occupied or at reduced capacity.

Using IoT to make your building smarter is a small investment that delivers high returns. With better insight into your operations, you can redefine agility while improving user experiences and strengthening your bottom line.

Risk

Analytics

By installing sensors in commercial refrigeration units, kitchen staff reduced manual temperature checking by 92%

- Sodexo Client Temperature Monitoring Study, 2019

“ Better data transforms daily interactions into purposeful experiences.

rise with *sodexo*

Each sensor uses LoRa to communicate to a Gateway off your network that has its own SIM Card to protect your network security and help keep your Wi-Fi channels clear

Optimize Real Estate, Improve Experiences

When you Rise with IoT by Sodexo, you can create new, more purposeful user experiences. Our plug-and-play service includes the sensors and support to capture, share, and analyze powerful information that allow you to make the most of every interaction in each space.

Performance

- Mix & match functionality
- One platform lowers cost & complexity
- Clear insights improve staff & consumer experience
- Limited upfront investment that can be amortized
- Reduction of energy & waste supports sustainability

Risk

- Consistency in reporting to meet regulations
- Security features such as text alerts, automatic shut off, lockdown and panic buttons
- Reduce risk related expenses, downtime, or closures
- Identify safety issues such as improper refrigeration temperatures
- Detect threats to your building with leak detection, security, and asset condition monitoring and continuous improvement

Analytics

- Global application connects into singular digital interface
- Real-time data, historical and trend reports to inform strategy
- Can integrate with client applications for broader view
- Accurate capture of information to validate future investments

A Comprehensive Solution

PREPARE

Community risk audit and safety assessment

PROTECT

Disinfection cleaning, hand hygiene training, inspection and compliance

ENABLE

Nutritious to-go/prepared meals and digital technologies

SUPPORT

Onsite health communications

OPTIMIZE

Physical distancing, space management/planning and efficiency services
